Central NSW Councils Showcase Nexus between Water & Energy Program

The 9th NSW Water Industry Operators Conference and Exhibition being held in Orange on 25-26 March provides the perfect forum for Central NSW Councils (Centroc) to showcase their *Nexus between Water & Energy Program*.

“This innovative program of works aims to increase the energy efficiency at 35 of the region’s water and waste water pump stations by reducing system infiltration and leakage,” said Cr Bill West Chair of Centroc.

“The pumping and treatment of water requires a lot of electricity and is a significant cost in the delivery of town water and sewer services,” said Cr West.

“Efforts to improve efficiencies by reducing the pump load caused by infiltration and leakage in the reticulation network will reduce energy usage and the costs associated with providing these essential services to our communities”.

“The WIOA Conference attracts industry professional and supplier experienced in achieving these efficiencies in water management,” said Cr West.

“The Centroc Water Utilities Alliance is pleased for the opportunity to showcase the work it’s been doing with a particular focus on Water Loss Management”.

“Water Loss Management is a key component of diligent water resource management saving both energy and water,” said Cr West.

“We are very pleased to be working in partnership with the Australian Government which has provided support for this activity.”
